The purpose of this program is to introduce general dental practitioners to dental implant surgical & restorative principles utilizing digital dentistry in a manner that provides for both didactic and a hands-on clinical experience. We always start with the final prosthesis in mind to be able to replicate the principal of “restorative driven implant dentistry, with a surgical component” as it is done ideally. After completing this 4-day program, each participant should be able to treatment plan, place and restore an implant in all but the most severe cases.

For most participants, the experience of this program will allow you to return to your respective practices and begin providing predictable implant therapy to your patients after gaining the clinical experience through conducting implant placement on live patients.

The attendees will be communicating with each other and the instructors closely to make sure all principles taught are clear and performed correctly. This allows each practitioner the ability to safely perform the procedure, multiple times, in a controlled environment and provide a realistic experience. This course bridges the gap between classroom lectures and actual surgical treatment in the doctors office back home. Due to the intensity and distinctiveness of our program, the course instructors will limit attendance to 12 participants.

During this implant boot camp, participants will have access to the instructors for the entire day so they can maximize their learning experience. Activities will include utilizing the CBCT X-ray pre- and post-op for planning, performing, and reviewing their own implant surgeries.

The primary focus of this program is for each participant to return to his or her office and immediately implement the procedures taught to perform dental implant surgery properly. To ensure this process we offer stateside support for all attendees after returning from the course and we will follow up with all the participants to smooth the transition in their own offices.

- State-of-the Art Facility
- All-inclusive
- 45 CE Hours
- Open to Doctors Worldwide

May Course - We are Honored to Present Special Guest Lecturer & Instructor

Dr. Achraf Souayah
PARTICIPANTS WILL LEARN

- Indications and contraindications for implants.
- Patient evaluation & treatment planning with the prosthetic outcome in focus
- PRF (Platelet Rich Fibrin) / CGF (Concentrated Growth Factors) - utilization & procedure
- Implant surgery protocols
- Different implant types and design
- Implant selection based upon bone density and volume
- Incision & flap design for implants & varied suture techniques
- CBCT evaluation and utilization
- Radiographic interpretation, implant alignment & positioning
- Crestal sinus lift technique

- Atraumatic extraction technique, simple socket grafting, predictable bone grafting techniques
- Pre-op & post-op protocols explained with review of analgesics/antibiotics. Management of complications.
- Introduction to grafting materials, membranes & socket preservation techniques following tooth extraction.
- Approaches for implant placement in the aesthetic zone and posterior maxilla & mandible.
- Loading protocols – immediate loading versus delayed loading.
- Prosthodontic principles.
- Cement-retained versus screw-retained restorations.
- Review of advanced clinical cases & protocol for extraction with immediate implant placement.

TEAM OF INSTRUCTORS

Dr. Michael Wehrle graduated from Baylor College of Dentistry in 1989 and from Worcester City Hospital in 1990. He began as an associate in the mid-cities (between Dallas and Ft. Worth) and then purchased his own practice in 1994. He worked at this original location for six years and then built a modern dental office at the present location in Hurst, Texas. In 1994 he joined a group of motivated citizens to form a dental clinic in Hurst that insures that any child in any school system in the mid-cities can have their basic dental needs met free of charge. He is the co-founder and chairman of this clinic. In 2011, he started Ultra Modern Dental Group in Puebla, Mexico, with the help of Tom Basile and Glen Clark. This clinic was created to meet the dental needs of all the citizens of Puebla, including orphans and missionaries.
